Bellima[®]
IN THE BEST POSSIBLE TASTE

Reducing calcium - for tea in perfect condition

Bellima®

IN THE BEST POSSIBLE TASTE

What's wrong with hard water?

Tea connoisseurs know the problem: boiling hard water results in **cloudy tea** with an unpleasant **surface film**, impaired taste and an accumulation of **limescale** in the kettle.

Traces of heavy metals and other elements can also affect the taste of tap water and the drinks you make with it.

The solution is the Bellima® fan!

The **Bellima® fan** softens your tap water, neutralises the pH value and adds valuable potassium. The result is **perfect water for translucent, aromatic tea**.

Bellima®: simply better

Just place the Bellima® fan **directly into the kettle** and allow to boil. It's as simple as that.

Jug filters can harbour germs and may also contain silver as an anti-bacterial agent. The Bellima fan is single-use, so there are **no bacteria**, and there is **no need for anti-bacterial agents**.

The Bellima® fan is an **entirely** natural, environmentally friendly product, made **from sustainable materials** (wood/cellulose): after use, simply recycle as paper or compost.

How does Bellima® work?

Bellima® **removes hardening agents** (calcium and magnesium) from your tap water and in exchange adds pH-neutral potassium.

What are the benefits?

Water treated with Bellima® **tastes better** and **significantly reduces deposits** in the kettle.

Tea is **clear and film-free**. At last you can savour coffee and tea as they are meant to taste!

How do I use Bellima®?

Bellima® is meant **for single use only**. Place the fan **into your kettle** in max. 1 litre of water and allow to boil, or steep in cold water for a little longer.

What is Bellima® made from?

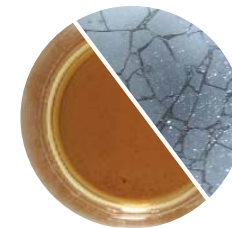

The Bellima® fan is made from **cellulose**, modified to food grade using a patented process. The material has been approved for food use XXXVI/1 "Filters for use with boiling water" by the German Institute for Risk Assessment.

Using Bellima® is so easy!

1) For preparing hot drinks:

Place a Bellima® fan **together with** max. 1 litre of tap **water into the kettle** and **allow to boil**. Remove the filter before using the hot water in the usual way.

Without Bellima®:
Unpleasant tea film, cloudy appearance, bitter after-taste

With Bellima®: no film, No cloudiness, no bitter after-taste, the best possible aroma

2) Purifying cold water:

Suspend the fan in max. 1 litre of tap water and stir briefly. Leave for at least 30 minutes, stirring occasionally if possible.
